## ITN Description and Specifications

- **ITN Title:** Six (6) Coleus Cultivars
- **ITN Number:** ITN22-03-08
- **ITN Territory:** As proposed by ITN respondents
- **ITN Announcement Date:** June 09, 2022
- **ITN Proposal Due Date:** Thursday, July 21, 2022, 12PM ET
- **Cultivar Descriptions:**

'UF18-51-6'

### **ITN22-03 'UF18-51-6' (U.S. Patent Pending)**

'UF18-51-6' is a standard sized, highly branched plant with an upright (not trailing), spreading growth habit. It has large, uniform ovate shaped leaves that are predominantly deep purple, with contrasting pink centers, and well-defined lime green margins. 'UF18-51-6' has shown a consistent fast growth rate and vigor in the greenhouse and landscape.

### **ITN22-04 'UF19-7-4' (U.S. Patent Pending)**

'UF19-7-4' is a vigorous growing plant with a distinctly uniform spreading habit that produces a plant that is wider than it is tall. It has lance-shaped leaves that are uniformly lime green colored, with cream-colored spots randomly scattered in the center of the leaf. Due to its superior vigor and lateral branching 'UF19-7-4' does not have to be pinched during production. These attributes save producers labor costs, space and time needed to produce a salable plant. 'UF19-7-4' has not been observed to produce flowers in any trial we have conducted to date, so it has long season performance in the landscape until late Fall which will appeal to home gardeners.

'UF19-7-4'

## ITN Description and Specifications

### ITN22-05 'UF19-40-7' (U.S. Patent Pending)

'UF19-40-7'

'UF19-40-7' is a vigorous plant with an upright, spreading growth habit. It has large leaves with contrasting pink centers, burnt orange mid-sections, and lime-green leaf margins. Normally this color combination fades in full sun with the consistent loss of pink color and a browning of the orange sections of the foliage. 'UF19-40-7' is exceptional because it maintains all three distinct colors in shade or sun. It also has good overall plant vigor and well-branched uniform habit that is not common in our population with plants having a significant amount of pink foliage color.

### ITN22-06 'UF19-42-14' (U.S. Patent Pending)

'UF19-42-14' is a vigorous, upright growing plant with a spreading habit, and bright yellow leaves with predominant magenta veins in a netted pattern. This plant maintains its foliage late into the Fall season until frost. 'UF19-42-14' has very stable leaf color in both sun and shade, and was well-branched and vigorous in all locations trialled. Due to its striking color combination and vigorous long-lasting landscape features, this plant will likely succeed when promoted and grown in landscapes as a specimen annual plant filling a large amount of space with color in a very short period of time.

'UF19-42-14'

## ITN Description and Specifications

'UF19-79-2'

### ITN22-07 'UF19-79-2' (U.S. Patent Pending)

'UF19-79-2' is a vigorous plant with lateral branching, uniform overall habit, and intense red color in sun and shade. 'UF19-79-2' is considered a rare red foliage genotype due to its extreme vigor and ability to grow four feet tall in the landscape while maintaining its deep red color.

### ITN22-08 'UF19-82-2' (U.S. Patent Pending)

'UF19-82-2' is a striking, vigorous plant with spreading form and upright growth habit, which grows almost twice as wide as it is tall. It has highly lobed reddish-purple leaves with distinct lime green margins that are uniform across the plant. It also does not vary for foliage color when grown in sun or shade, and does not produce flowers. These characteristics will lead to this genotype being marketed in larger 'big box' retail situations because it is novel, grows quickly for producers, and provides stable deep red annual color in summer gardens.

## What is an ITN?

Newly developed cultivars, experimental lines, and plant germplasm are routinely approved for release through UF's Florida Agricultural Experiment Station (FAES). Florida Foundation Seed Producers, Inc. (FFSP), a non-profit corporation and direct support organization of the University of Florida, is continuously seeking strategic production and marketing companies in commercialization of a diverse portfolio of newly developed plant cultivars. For certain crops, several companies may express interest in an opportunity for an exclusive license for an improved plant cultivar. The Invitation to Negotiate (ITN), implemented in 2006, is a process which enables FFSP to fairly and objectively evaluate all commercial proposals and comments to effectively identify superior companies to deliver new cultivars to the public. In return, licensed companies provide royalties back to FFSP for reinvestment in the breeding and development of new, improved cultivars at the FAES.

The ITN process encourages an open engagement of all interested companies and stakeholders. Companies submitting proposals and/or comments to an ITN will be evaluated consistently and fairly by a review committee comprised of staff members of FFSP and expert faculty advisors from FAES.

FFSP strives to secure the partner/partners that best meet the needs of the State of Florida and its people, UF, and the FAES breeding program. Responders to the ITN will be evaluated using a consistent methodology, allowing review committee members to weigh core elements and objectively evaluate multiple proposals. The ITN specifications objectively guide critical responses in a proposal and are designed to explore the project's commercial scope for a sustainable business, consistent with the necessity to deliver FAES plant breeding products and technology to the public. The ITN requires interested companies to describe their prior experience and current business model. Companies are asked to describe a plan of action concerning the new business opportunity. The ITN also requests details of marketing and production plans which will successfully deliver a sound commercial operation and ensure that sustaining royalties are returned to support the FAES breeding program. Initiation of an ITN and the participation by a company in an ITN process does not mean an exclusive agreement will be eventually awarded; only that responsive companies will receive consideration and a fair evaluation of proposals and comments submitted.

At the conclusion of the ITN process, it is everyone's hope that most details can be mutually agreed upon, resulting in an award of a license to a qualified and successful partner.

Please refer to the general conditions of this ITN for specific specifications and instructions.
